Profile

Senior front-end developer with 12 years of experience. At Merkle Switzerland, I built websites for luxury watch brands: Vacheron Constantin, Audemars Piguet, Chopard, Hublot, Baume & Mercier.

I build front-end architectures that last through redesigns and I add real-time 3D when a project calls for it, from the first prototype to the live website.

> Looking for a permanent position in the Geneva or Annecy area, in a team that cares about craft, performance and accessibility.

Experience

Senior Front-End Developer

Merkle Switzerland · Geneva

Oct 2014 – Dec 2026

Joined as Front-End Consultant

- Technical front-end lead on luxury and corporate projects: made the technical decisions, reviewed code and onboarded new developers.
- Built the front-end architecture of Vacheron Constantin's brand site, still in use two redesigns later and reused for Baume & Mercier and Audemars Piguet.
- Member of the Emerging Experiences team (2022–2024): R&D in real-time 3D, Unreal Engine, Unity and AR/VR. Since then, I've built 3D proofs of concept that help win client pitches.
- Worked between designers, clients and back-end teams to deliver demanding, animation-heavy designs within the limits of each CMS.

Expertise

Front-End

TypeScript · Vue 3 / Nuxt · Astro · Accessibility · WCAG 2.2 · Headless CMS · Modern CSS · Design systems & tokens · Vite · Node.js · CI/CD · Claude Code / Copilot

3D & Creative

Three.js · React Three Fiber · WebGPU / WebGL · Blender · GSAP · Shaders · TSL / GLSL · PixiJS · Unreal Engine

Selected client projects

Chopard · 3D Viewer · 2025
3D Development & Asset Pipeline

The client's 3D models came in mixed formats and sizes. Wrote a Blender + glTF-Transform pipeline to process 60+ watches in batch, down to around 6 MB each with no visible quality loss. Built the three.js viewer, ready to plug into the CMS, with custom shaders for the diamonds and physics for the moving parts.

Devenir · Brain-controlled game · 2022
Unreal Engine Development

Unreal Engine game played with the mind, using an Emotiv brain-computer interface headset as the controller. Built on a tight two-month deadline, with a setup that runs on any venue network: the Emotiv SDK streams over WebSockets from a client computer to a Socket.IO relay server that controls the game. Shown at Digital Festival Zurich, then OMR 23.

W3 Best in Show - Webby People's Voice

Audemars Piguet · Musée Atelier & brand site · 2021
Front-End & 3D Development

The museum homepage had a scroll-driven three.js scene that editors needed to author themselves, in the CMS's WYSIWYG editor. Built it so every step of the 3D animation can be edited visually, within the CMS's strict HTML templating. Also built the main brand site, rich in scroll-triggered animations.

Vacheron Constantin
Front-End Architecture

Brought a modern framework (Vue.js) and build tools to a CMS that had none, so the team could iterate fast on the client's demanding designs. The architecture was later reused for Baume & Mercier and Audemars Piguet. Earlier, built heavily animated single-page experiences for new watch and collection launches, each time on the latest front-end tools.
